DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I, claims 1-7, in the reply filed on 10/5/04 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 8-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/5/04.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

4. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: "6" (Fig. 2). Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the

Art Unit: 1764

applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

5. The drawings have not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the drawings to comply with CFR 1.84(p)(5), e.g. they should include the reference sign(s) mentioned in the specification and vice versa.

Specification

6. The disclosure is objected to because of the following informalities:

On page 14, line 15 "Figure 15 shows" should be changed to --Figures 15A and 15B show--.

Appropriate correction is required.

7. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

8. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

9. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 7, lines 2-6 it is unclear as to what structural limitation applicants are attempting to recite, e.g. what is meant by "... material placed in an exhaust gas alternating between a first

Art Unit: 1764

period ... and a second period ...”, does it mean that at a first period the material is in the exhaust gas and a second period the material is not in the exhaust gas? Or how the exhaust gas holds the material in place.

Claim Rejections - 35 USC § 102

10. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

11. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 896,134.

With respect to claims 1-2, 7, EP 896,134 discloses a catalyst for exhaust gas purification comprising:

an NO_x absorbent material which absorbs NO_x in an exhaust gas in an environment of excess oxygen whose exhaust gas oxygen concentration level is high, whereas, when the exhaust gas oxygen concentration level becomes lower in a given temperature range, said NO_x absorbent material releases said absorbed NO_x;

a precious metal; and

an oxygen storage material, such as Ce-Pr oxide (see, for example, page 2, paragraph 2; page 4, paragraph 16 to page 5, paragraph 19).

Although EP 896,134 is silent as to the properties of the oxygen storage material, e.g. ability to release a larger amount of oxygen in said given temperature range in comparison with other temperature ranges, such properties are inherent therein since the oxygen storage material

Art Unit: 1764

of EP 896,134 is the same as that of the instant claims. It is also noted that temperature is directed to method limitation which is of no patentable moment in apparatus claims.

With respect to claims 3-4, EP 896,134 discloses that the oxygen storage material is a Ce-Pr mixed oxide (see, for example, page 5, paragraph 19).

With respect to claim 5, EP 896,134 discloses that the oxygen material is supported on a substrate in an amount which falls within the instant range (see, for example, page 9, paragraph 43; page 10, paragraph 47).

With respect to claim 6, EP 896,134 discloses that the NO_x absorbent material is supported on the oxygen storage material (see, for example, page 9, paragraph 42).

Instant claims 1-7 structurally read on the apparatus of EP 896,134.

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Miyoshi et al is cited for showing state of the art.
